

ABSTRACT

5 A method and system for processing credit card data
through a wireless hand held device. credit card data
may be read from a credit card utilizing a credit card
reader integrated with a wireless hand held device. The
credit card holder is physically permitted to input an
electronic signature through a touch screen display
10 integrated with the wireless hand held device to
authorize a credit card transaction associated with the
credit card. The credit card data may be transferred
from the wireless hand held device to a wireless
network. A physical signature can be input via the
15 touch screen display by a credit card holder is accepted
and thereafter converted to an electronic signature.
The electronic signature may be transferred from the
wireless hand held device through a wireless network to
a server. The electronic signature and the credit card
20 data can be processed through the server, and the credit
card transaction additionally stored at the server. A
customer receipt may be rendered through local printing,
electronic transfer and/or delivery to electronic mail
accounts, or in accordance with a customer profile.
